- Dam's Production: BR 3@96, NR 3@108 and YR 2@106 with a calving interval of 351 days. (Pathfinder)
- Grandam's Production: BR 6@99, NR 6@108 and 5@100 (Pathfinder).
- Great grandam, G205 served as a Pathfinder® CC&7 daughter in the Hoover herd.
- Pathfinder donor dam L168 is one of the superior young cows in the Hoover Angus cow herd today! Her first two sons have averaged \$22,750 at auction, and includes the top-selling bull at \$31,000 in the 2016 Hoover Angus auction, Hoover Cyclone, selected by Alta Genetics and Diamond J Angus. L168's first son was the 7th top selling bull at \$14,500 in the 2015 Hoover sale.
- Pathfinder® grandam J46 also serves as a working donor at Hoover Angus. She maintains a phenomenal 357-day calving interval on her 6 natural calves despite having stolen flushes from her three different years! Her progeny and embryo sales to-date have grossed over \$100,000 to make her one of the top income-producing cows in the Hoover herd at 7 years of age! Her nine progeny to come to auction have averaged \$10,425. J46's most recent calf was the third top adjusted weaning weight bull calf of the 2017 Hoover crop, among 161 contemporaries, weighing 897 pounds!
- Sire 38 Special was the \$100,000 selection of Hoover Angus and Alta Genetics in the 2016 Baldrige Bros. Sale, where 38 Special and his 6 flush brothers averaged \$58,928! 38 Special was definitely the power, high performance bull of his flush and a standout with added frame in the Baldrige offering. 38 Special's first calf crop was weaned in August, 2017 at Hoover Angus. A 38 Special heifer calf was the #1 adjusted weaning weight heifer of the crop at 872 pounds, which is the heaviest adjusted weaning weight of any female in Hoover history!
- These embryos offer a unique pedigree for the Angus breed as well as a "no holes" EPD package. Resulting progeny should be easy to market and will be some of the early 38 Special progeny available in the country.

235 4 Frozen Embryos (2 Grade 1 • 2 Grade 2)

- Dam's Production: NR 8@103, YR 5@103. Calving interval 358 days (Pathfinder®)
- Grandam's Production: NR 10@110. Calving interval 360 days (Pathfinder®)
- Great-grandam's Production: NR 10@106 (Pathfinder®)
- G25 is arguably one of, if not the prettiest CC&7 female in the Hoover herd. She maintains phenomenal structure, udder quality and fleshing ability as she nears 10 years of age. Her most recent calf weaned at 855 pounds to be the 11th top adjusted weaning weight bull calf of the 2017 Hoover crop! A daughter of G25 was the 2nd high ribeye scanning female of her crop (among 121 contemporaries) with a 14.0" ribeye, and a son of G25 was the 4th top scanning ribeye bull of his group among 75 herd mates.
- Although sought after, Counselor semen is no longer available. Counselor makes beautiful, uniform daughters with superior udder quality. A Counselor daughter raised the #1 adjusted weaning weight bull calf of the spring 2017 Hoover crop at 911 pounds! He sires big scrotal progeny, and likewise has highly fertile daughters. His Heifer Pregnancy EPD is in the top 1% of the breed, as is his 50K for HP.
- Counselor sired Hoover Counselor N29 that recently topped the Borns Angus Dispersion at \$39,000 ½ interest, selling to Select Sires.
- A full brother to this embryo mating was a photo feature in the 2013 Hoover Angus production sale selling to Brenner Angus of Colorado. He was the 14th top weaning weight bull of his crop.
- This embryo pedigree is a rare find with 10 Pathfinders®, including three consecutive generations of Pathfinder dams on his bottom side! With Counselor semen unavailable, this mating is truly unique.

Hoover Cyclone
Maternal brother to Lot 234 embryos

Hoover Bullseye N6
Maternal brother to the dam of Lot 234

Connealy Counselor
Sire of Lot 235

Hoover Counselor L25
Full brother to Lot 235
